Professional Summary

Data Analyst with **3+ years** of experience across Finance, Healthcare, and Retail, building Power BI, Python, and SQL-driven analytics solutions. Translates stakeholder requirements into scalable data models, automated ETL pipelines, and self-service dashboards that turn multi-source data into insights the business actually uses.

Skills

Programming & Databases: SQL, Python, Pandas, PySpark, MySQL, PostgreSQL, SQL Server

Cloud & ETL Tools: Azure Data Factory, Databricks, Azure SQL, Power Automate, BigQuery, ETL, Data Modeling, Data Warehousing, Data Validation

BI & Visualization: Power BI, Looker Studio, Power Query, DAX, Advanced Excel, Matplotlib, Seaborn

Analytical Expertise: Statistical Analysis, Hypothesis Testing, Root Cause Analysis, Query Optimization, Forecasting, KPI Development, Requirement Gathering, Stakeholder Management

Work Experience

Data Analyst, Capital - Delhi, India

Sept 2025 - Present

- Automated a Power BI reporting pipeline with Power Automate, delivering role-based NPA and disbursement reports to **200+** stakeholders across **62** branches and **5** partner organizations, saving **4** hours of manual work daily.
- Collaborated with finance stakeholders to gather requirements, define key KPIs and migrate SQL Server data into a **12-table** relational schema that cut report preparation time by **90%** and gave CXO leadership real-time portfolio visibility.
- Built an EMI receivable forecasting model for **5,000+** loan accounts in Power BI, automatically generating repayment schedules and reconciling settlements through loan maturity, reducing update time by **60%**.
- Cut portfolio risk analysis time by **50%** by building a Power BI dashboard across **15** business dimensions including ticket size, banking product, and branch, segmenting outstanding principal into DPD buckets to help teams flag risk earlier.
- Optimized SQL queries using CTEs, window functions, and indexing, trimming execution time from **15 mins to under 2 mins**, and applied Row-Level Security with Incremental Refresh in Power BI, lowering refresh time by **40%**.
- Mentored **4** analysts on Power BI and SQL, reviewing reports and debugging DAX measures to improve output quality.

Data Analyst, THB - Gurugram, India

Apr 2024 - Mar 2025

- Managed a daily Azure Data Factory pipeline ingesting **10M+** healthcare records from SQL Server to ADLS, transforming data via PySpark and publishing curated datasets for downstream Power BI analytics.
- Wrote SQL scripts to check data quality across **20** tables eliminating manual testing and saving the team **10+** hours weekly.
- Developed a sales target attainment and compliance dashboard for **600+** field reps across **12** divisions to flag compliance gaps and reallocate underperforming territories ahead of monthly reviews.
- Applied Python based trend and exploratory analysis to patient and claim records, identifying data inconsistencies in **one-third** of review cycles before they reached Power BI dashboards used for compliance reporting.
- Standardized data pipeline logic across **13** source-to-target mappings, minimizing reporting delays and accelerating clinical report delivery by **2 days** per cycle.

Associate Data Analyst, Indo Appliances - Delhi, India

Jan 2023 - Feb 2024

- Streamlined ad hoc data requests for cross-functional teams by writing reusable SQL scripts, handling **10-12** requests weekly and cutting pull time by **3 hours**.
- Analyzed stock-out patterns across product categories using SQL, flagging frequently out-of-stock bestsellers for procurement follow-up and driving a **20%** reduction in repeat stock-outs.
- Replaced manual Excel reports with automated Power BI dashboards that reduced reporting cycle time by **75%**.
- Designed a Power BI dashboard tracking weekly performance across **40** SKUs and **9** product categories, used by sales and procurement teams to monitor pricing, restocking, and category-level revenue trends.
- Accelerated sales and inventory reporting turnaround from **1-2 days to under 2 hours** by building Python scripts to automate data extraction and cleaning, replacing Excel-based reporting.

Certifications & Achievements

- HackerRank Advanced Certifications & Gold Badges - SQL & Python
- Data Science Test Gold Badge - Foundit

Education

Manav Rachna International Institute of Research and Studies, B.Tech

Faridabad, India

- GPA: 7.8/10, Ranked 2nd in course (Top 2%)
